/note="Organ: mixed (see below); Vector: pT7T3D-Pac
(Pharmacia) with a modified polylinker; Site_1: Not I;
Site_2: Eco RI; Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NbHPU, and fetal heart NbHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 484488-489479."

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). CC The method involves administering hypoxia inducible factor-1 (HIF-1) CC binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding complex modulators. mdr1-hypoxia responsive element (HRE) binding molecules or antisense mucleic acid molecules and CC SUMO-1 binding molecules or antisense molecules are useful for treating a CC (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphopycliferative disorders CC (lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid CC disorders include chronic or acute myeloid leukaemia, e.g. angiogenic CC invention is used in gene therapy. The present sequence is human mdr1 XX gene HIF-1 binding site DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is an antisense oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its

The invention relates to a new promoter chimera for in vivo or in vitro expression that comprises: (a) a viral promoter, intron or other unit transcription regulatory sequence of any length; and (b) a unit diseasespecific promoter, intron or other unit transcription regulatory sequence of any length sensitive to genotoxic stress. The promoter chimera, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the relevant gene products. The HCMV IE-hMDR1 promoter chimeras of the present invention are more potent than either promoter standing alone. Sequences ABV75270-283 represent oligonucleotides used in the construction of promoter chimeras having hMDR1 disease specific DNA element and deletion of HCMV IE sequences not contributing to the
                                                             expression that comprises: (a) a viral promoter, intron or other unit transcription regulatory sequence of any length; and (b) a unit disease-specific promoter, intron or other unit transcription regulatory sequence of any length sensitive to genotoxic stress. The promoter chimera, and vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the present invention are more potent than either promoter chimeras of the present invention are more potent than either promoter standing alone. Sequences ABV75270-283 represent oligonucleotides used in the construction of promoter chimeras having hMDR1 disease specific DNA element and deletion of HCMV IE sequences not contributing to the activity of promoter chimera

                                                                                                                                                                                                                                                                      The invention relates to a new promoter chimera for in vivo or in vitro cexpression that comprises: (a) a viral promoter, intron or other unit certanscription regulatory sequence of any length; and (b) a unit disease-ce specific promoter, intron or other unit transcription regulatory sequence of any length; sensitive to genotoxic stress. The promoter chimera, and ce vector comprising the chimera are useful for in vivo or in vitro cexpression. The method is useful for the generation of improved cexpression constructs for in vitro and in vivo expression of constructs for in vitro and in vivo expression of cexpression constructs for in vitro and in vivo expression constructs for in vitro and in vivo expression constructs for in vitro and in vivo expression of the present invention are more potent than either promoter ce thanding alone. Sequences ABV75270-283 represent oligenucleotides used in the construction of promoter chimeras having hWDR1 disease specific DNA celement and deletion of HCMV IE sequences not contributing to the activity of promoter chimera
                                                                                                               Best Loc

The promoter chimera, and vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the present invention are more potent than either promoter chimeras of the present invention are more potent than either promoter standing alone. Sequences ABV75270-283 represent oligonucleotides used in the construction of promoter chimeras having hMDR1 disease specific DNA element and delection of HCMV IE sequences not contributing to the activity of promoter chimera

The promoter chimera, and vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the present invention are more potent than either promoter chimeras of the present invention are more potent than either promoter standing alone. Sequences ABV75270-283 represent oligonucleotides used in the construction of promoter chimeras having hMDR1 disease specific DNA element and deletion of HCMV IE sequences not contributing to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      expression that comprises: (a) a viral promoter, intron or other unit transcription regulatory sequence of any length; and (b) a unit diseasespecific promoter, intron or other unit transcription regulatory sequence of any length sensitive to genotoxic stress. The promoter chimera, and vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the present invention are more persent invention are more potent than either promoter chimeras of the present invention are more potent than either promoter the construction of promoter chimeras having hMDRI disease specific DNA element and deletion of HCMV IE sequences not contributing to the activity of promoter chimera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New promoter chimera useful for in vivo or in vitro expression comprises viral promoter, intron or other transcription regulatory elements and disease-specific promoter, intron or other transcription regulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Page 21; 48pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2003-103274/09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  King AC

The invention relates to a new promoter chimera for in vivo or in vitro cexpression that comprises: (a) a viral promoter, intron or other unit comparises: (a) a viral promoter, intron or other unit comparises: (b) a unit disease-cexpectific promoter, intron or other unit transcription regulatory sequence of any length sensitive to genotoxic stress. The promoter chimera, and cexpression. The method is useful for in vivo or in vitro cexpression. The method is useful for the generation of improved cexpression constructs for in vitro and in vivo expression of the present jene products. The HCMV IE-hMDR1 promoter chimeras of the present invention are more potent than either promoter ce standing alone. Sequences ABV75270-283 represent oligonucleotides used in the construction of promoter chimeras having hMDR1 disease specific DNA celement and deletion of HCMV IE sequences not contributing to the contivity of promoter chimera

30-MAR-2001; 2001US-0280211P 29-MAR-2002; 2002WO-US009882 (KING/) KING

New promoter chimera useful for in vivo or in vitro expression comprises viral promoter, intron or other transcription regulatory elements and disease-specific promoter, intron or other transcription regulatory

WPI; 2003-103274/09.

21; 48pp; English

The invention relates to a new promoter chimera for in vivo or in vitro expression that comprises: (a) a viral promoter, intron or other unit transcription regulatory sequence of any length; and (b) a unit disease-specific promoter, intron or other unit transcription regulatory sequence of any length sensitive to genotoxic stress. The promoter chimera, and vector comprising the chimera are useful for in vivo or in vitro expression. The method is useful for the generation of improved expression constructs for in vitro and in vivo expression of the chimera perioducts. The HCMV IE-hMDR1 promoter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                   A method of identifying (MI) a compound that modulates untranslated region-dependent expression of a vascular endothelial growth factor (VEGF) gene comprises contacting a member of a library of compounds with a cell or cell-free translation mixture containing a reporter gene operably linked to an untranslated region (UTR) of the VEGF gene, and detecting expression of the reporter gene. A compound is identified as modulator if the level of expression of the reporter gene in the presence of the compound is altered as compared to that in the absence of the compound or in the presence of a control. Compounds identified by MI are useful for treating, preventing or ameliorating cancer or its symptoms, and/or for inhibiting angiogenesis. This sequence corresponds to a
                                                                                                                                                                                      Sequence 424
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chimeras of the partial standing alone. Standing alone. Standing element and delement and deleme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying modulators of untranslated region-dependent expression of a VEGF gene, useful for treating cancer, comprises contacting a compound with a cell or translation mixture containing a reporter gene linked to
                                                                                                                                                                                                                                                                 therapeutic untranslated region used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example; SEQ ID NO 51;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                         Matches
                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                This is a preferred fragment of the mdr-1 gene promoter, isolated from human DNA. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ર્
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel method of determining cytosine CC methylation in a sample of genomic DNA which comprises treating the cample with hydrogen sulphite so that the cytosine is converted to uracil CC whilst 5-methylcytosine remains unchanged, amplifying sections of the DNA CC using at least 2 PCR primers and studying the base composition of both CC complementary amplified strands whereby methylation status is deduced CC from the difference in molecular weight of the two strands. The method is CC used to diagnose and/or prognose unwanted side effects of medication, CC cancer, central nervous system disorders, aggression symptoms or CC behavioural disorders, clinical, psychological and social consequence of CC brain damage, psychotic and personality disorders dementia and CC associated disorders, cardiovascular disease, malfunction, damage or CC disease of the gastrointestinal tract, breathing system, bone muscle, CC endocrine or metabolic system, injury, infection, abnormal development or sexual malfunction. This sequence represents the human MdrI DNA fragment CC amplified by the PCR primers represented in ABX94593 & ABX94594 and is CC used to illustrate the method of the invention

CC toxicological response to an agent, which comprises comparing the cexpression profile of one or more human toxic response genes to a CC reference gene expression profile indicative of toxicity, and so CC determining the presence of a toxic response to the agent. Also CC described: (1) an array comprising one or more polynucleotides selected CC from the genes corresponding to the partial sequences given in ABZ82842 CC from the genes corresponding to the partial sequences given in ABZ82842 CC in ABZ84764, or their fragments of at least 20 nucleotides, or homologues (2) determining if a gene putatively identified to be a toxic CC response gene plays a role on toxic response pathways by determining the CC expression profile of the gene after exposure of cells or a human subject to a known toxic pharmaceutical or industrial gent, comprising: (a) CC exposing cells to an agent or isolating the test gene expression profile (comparing the test profile to the expression profile of a gene after exposure to a known toxic pharmaceutical or industrial agent; and (c) comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile to the expression profile to the expression profile of a gene with a similar function or exposure to other known toxic compounds. The methods are useful for comparing the test profile to the agent for a cellular, organ or system level. The arrays comprising the human genes are useful for toxicological screening of drugs, pharmaceutical compounds and chemicals

                                                                                                                                                                                                                                       This is a preferred fragment of the mdr-1 gene promoter, isolated from human DNA. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, II-2, II-6, etc.) can be expressed in cancer cells under the control of cytostatic agents. (Updated on 25-MAR-2003 to correct PN field.)

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score
